In 1991, some hikers in the Italian Alps found a dead body. The body was partly frozen in the ice and when scientists examined it, they discovered something amazing. The man had died over 5,300 years ago! He is now known as the Iceman and is the oldest complete human mummy on earth.

Who was the Iceman and why did he die by himself in the snow? Scientists are asking themselves these questions and are now slowly putting together the *evidence* to solve the mystery.

Examinations of the body have provided proof that the Iceman was a young man and didn't have the strong arms of a laborer. Among his weapons was a copper (铜) axe, which shows that he was wealthy. He also had 57 tattoos (文身) on his body. By examining the food he had eaten, scientists have even managed to work out exactly where he lived in Italy!

There have been many different theories about the Iceman's death. Scientists at first thought that the cause of his death was probably the extreme cold. In 2001, however, a new cause of death was discovered. An X-ray examination of the body showed a small dark shape beneath the Iceman's left shoulder. It showed that the stone head of an arrow had caused the injury that killed him. Now there was suddenly a new theory that the Iceman was victim of a murder(谋杀)!

In 2003, an Australian scientist discovered the blood of four different people on the Iceman's clothes. This tells us that he was probably trying to defend himself in a fight before he was murdered. This could also explain the injuries he had on his hand and head. Some archaeologists think that the Iceman's murder was the end of fight for power among his people, but not everyone agrees.

The case of the Iceman isn't closed yet and the checks will continue. Through the story of this ancient human being, we will continue to learn more about his life and our history.

66. It's still unknown _____.

- | | |
|--------------------------------|-----------------------------------|
| A. whether the Iceman was rich | B. who killed the Iceman |
| C. where the Iceman was found | D. what food the Iceman had eaten |

67. What is the word in the reading that has the same meaning as "*evidence*"?

- | | | | |
|-----------|------------|-----------|-----------|
| A. Study. | B. Victim. | C. Proof. | D. Story. |
|-----------|------------|-----------|-----------|

68. Why do scientists believe the Iceman was rich?

- | | |
|---------------------------------------|------------------------------------------|
| A. He was not a young man. | B. He had injuries on his hand and head. |
| C. He had a copper axe as his weapon. | D. He died quite a long time ago. |

69. What showed that the Iceman had a bad injury?

- | | |
|---------------------------------------|----------------------------------|
| A. The injury in his left shoulder | B. The injury on his head |
| C. The blood of four different people | D. The food the Iceman had eaten |

70. We can know from the reading _____.

- | |
|-------------------------------------------------------|
| A. the case of the Ice man is over |
| B. the Iceman was killed by his people for power |
| C. the injuries on his hand and head caused the death |
| D. the work about the Iceman will go on |
